

Midterm Seatwork #2 - Smart Wallet System

KARIM, Denisse Jane

BSIT 2-3

NO. _____
DATE 03-25

① Java Program

```
import java.util.Scanner;
```

```
public class SmartWalletSystem-Karim {  
    public static void main(String[] args) {
```

```
        Scanner input = new Scanner(System.in);
```

```
        double balance = 5000;
```

```
        int option = 0;
```

```
        int transactions = 0;
```

```
        while (option != 4) {
```

```
            System.out.println("===== SMART WALLET MENU =====");
```

```
            System.out.println("1. View Balance");
```

```
            System.out.println("2. Cash In");
```

```
            System.out.println("3. Send Money");
```

```
            System.out.println("4. Exit");
```

```
            System.out.print("Enter choice: ");
```

```
            option = input.nextInt();
```

```
            switch (option) {
```

```
                case 1:
```

```
                    System.out.println("Balance = " + balance);
```

```
                    transactions++;
```

```
                    break;
```

case 2:

```
System.out.println("Enter cash in amount: ");  
double addAmount = input.nextDouble();
```

```
if (addAmount <= 0) {  
    System.out.println("Invalid amount.");  
} else {  
    balance += addAmount;  
    System.out.println("New Balance = " + balance);  
    transactions++;  
}  
break;
```

case 3:

```
System.out.println("Enter amount to send: ");  
double transferAmount = input.nextDouble();
```

```
if (transferAmount < 100) {  
    System.out.println("Minimum is 100.");  
} else if (transferAmount > 1500) {  
    System.out.println("Exceeds maximum limit");  
} else if (transferAmount > balance) {  
    System.out.println("Not enough balance.");  
} else {  
    balance -= transferAmount;  
    System.out.println("Sent Successfully!");  
    System.out.println("Remaining Balance: " + balance);  
    transactions++;  
}  
break;
```

case 4:

```
System.out.println("Exiting the program..");  
System.out.println("Transaction Count : "  
+ transactions);
```

```
break;
```

default:

```
System.out.println("Invalid choice.");
```

```
}
```

```
}
```

```
}
```

```
}
```

② Sample Execution

* Transaction 1:

Choice: 2

Cash In: 500

Output: New Balance = 5500.0

* Transaction 2:

Choice: 3

Send Money: 2000

Output: Exceeds maximum limit

* Transaction 3:

Choice: 3

Send Money: 500

Output: Remaining Balance = 5000.0

* Transaction 4:

Choice: 1

Output: Balance = 5000.0

* Choice: 4

Output: Transaction Count : 3

(3) Short Explanation

While Loop - keeps the program running repeatedly only until the user selects the exit option 4.

Switch Case - controls the menu by executing actions based on the user's chosen option

If-else - checks and validates transactions and proceeds to the next actionable step. If conditions are not met, the transaction is rejected, if valid it is processed successfully.
